

## **Caring for God's House, Caring for Each Other**

**Dear Church Family,**

As part of our calling to faithfully steward what God has entrusted to us, we want to share an important next step in caring for our church home - upgrading our heating, ventilation, and air conditioning (HVAC) systems, improving air circulation, and installing solar panels to help reduce long-term costs while lessening our environmental impact.

### **Why now?**

Our current systems are aging, inefficient, and costly to maintain. They impact both our budget and the comfort and air quality we provide to our growing congregation. These upgrades are not just practical but expressions of love and responsibility. They will help ensure our church remains a healthy, welcoming space for worship, learning, community, and service - accessible to all ages and abilities.

Because this is a significant investment, we deeply value your input. We invite you to join us for a **Congregational Town Hall at 6:30 pm, May 21, in the Fireside Room**, where we'll share more details, answer questions, and most importantly, listen. This is a journey we share as a church family, and we want every voice to be part of the conversation.

**Our goal** is to ensure that this project is not only a faithful step forward today but also aligns with any future expansion plans. Together, let's invest in a sustainable future for our church and for generations to come.

***"The Earth is the Lord's, and everything in it." – Psalm 24:1***

In Christ,

**Building Maintenance and Expansion Team**
